1969. 374 pages. Hfl. 60.— (140 s.) LC-no.: 68-54511 SBN 7204 0150 X

The English translation of the Russian original, this book is based mainly on results obtained by the authors during their investigations over the past few years. In the last decade the method of dispersion relations has occupied an important place in the theory of the interactions of elementary particles. Very recently it has played an important role in the development of a new approach associated with symmetries and current algebras. This volume is devoted to application of the dispersion relations method to the problem of strong interactions of elementary particles at low energies. An additional chapter covering the most recent results up to 1968 has been written especially for this edition.

Nuclear and Particle Physics

1969. 508 pages. Hfl. 50.– (117 s.) SBN 7204 0146 1

An introduction to the subject of nuclear and particle physics as well as a textbook for final year undergraduate and for first year graduate courses. It is also suitable as a single course text for chemistry or engineering students. The emphasis is on concepts rather than upon detail so that the coverage is quite complete. The advances in elementary particle physics made in recent years are presented as a subject area closely connected to that of nuclear structure, for example the symmetry ideas common to both. The crucial experimental facts are inevitably highlighted since the author is an experimental physicist. The details of nuclear theories are described but not developed. A few challenging problems are included, and solutions given, at the end of the book.
